

Please cancel claims 1-13 without prejudice.

Please add the following new claims:

The packaging laminate according to claim 14 wherein the linear fold regions are treated with an adhesion counter-acting agent.

16. The packaging laminate according to claim 14 wherein the non-fold regions are treated with an adhesion agent.

20. The method according to claim 19 wherein the linear fold regions are treated with an adhesion counter-acting agent between the first and second layers.

21. The method according to claim 19 wherein the non-linear fold regions are treated with an adhesion promoting agent between the first and second layers.

*21 cont.*  
22. The method according to claim 21 wherein the adhesion promoting agent is an ultraviolet-curing agent, and the treating is effected by ultraviolet radiation after the first and second layers have been laid together.

*Sub B5*  
23. The method according to claim 21 wherein the adhesion promoting agent is an electron beam curing agent, and the treating is effected by electron beam radiation after the first and second layers have been laid together.

24. The method according to claim 19 wherein the first and second layers are adhered to one another by the supply of heat and the treating is effected by providing an insufficient quantity of heat for adhesion to the linear fold regions.

15

*b*  
25. The method according to claim 24 wherein one of the first and second ~~layers~~ <sup>layers</sup> absorbs heat and the plurality of linear fold regions of the layer absorbing heat absorbs an insufficient quantity of heat for adhesion.

*Sub B5*  
26. The method according to claim 19 wherein the non-fold regions of at least one of the first and second layers is darkened relative to the linear fold regions, and the treating is effected by supplying infrared radiation.

27. A packaging container having non-scored crease lines, the packaging container comprising:

a first layer having a first plurality of linear fold regions defining a plurality crease lines of the packaging container, the first layer also having a first plurality of non-fold regions, the first plurality of linear fold regions being treated differently than the first plurality of non-fold regions; and

a second layer having a second plurality of linear fold regions defining a plurality crease lines of the packaging container, the second layer also having a second plurality of non-fold regions, the second plurality of linear fold regions being treated differently than the second plurality of non-fold regions.

28. The packaging container according to claim 27 wherein the non-fold regions of at least one of the first and second layers is darkened relative to the linear fold regions.

29. The packaging container according to claim 27 further comprising an adhesion counteracting agent applied to at least one of the plurality of linear fold regions.

30. The packaging container according to <sup>claim</sup> ~~claim~~ 27 further comprising an adhesion agent applied to at least one of the non-fold regions of the packaging container.
